I am a data analytics student with practical experience working with structured data, analytical tools, and reporting systems through academic projects and professional experience. I have a strong foundation in SQL, Python, and data visualization, with a focus on data accuracy, problem-solving, and clear communication of insights. I am motivated to apply my analytical skills in a professional environment where I can contribute meaningfully while continuing to learn and grow.

Professional Summary

I'm a Data Analytics student with hands-on experience working with structured datasets, SQL databases, and data visualization tools through academic and professional projects. Skilled in transforming raw data into meaningful insights using Python, SQL, and Power BI. I have strong attention to detail, data validation, and the ability to communicate analytical findings clearly. Seeking opportunities to apply data analytics and problem-solving skills in an entry-level IT or data analyst role.

Technical Skills

Programming & Data Analysis

- SQL
- Python

Databases

- MySQL
- SQL Server

Data Visualization & Reporting

- Power BI
- SSRS Report Builder

Data Management

- Data Modelling
- Entity Relationship Diagrams (ERDs)
- Database Normalization

Web Technologies

- HTML5

Tools

- Microsoft Excel
- Microsoft Office
- Google Docs & Sheets

Education

IT Data Analytics – College Diploma

NSCC – Institute of Technology, Halifax, NS

September 2024 – June 2026

Academic Projects

NVIDIA Stock Price Predictor

Developed a machine learning model in Python to predict NVIDIA stock price trends using historical market data. Performed data preprocessing, feature engineering with technical indicators, and model evaluation using regression metrics. Utilized Pandas, NumPy, and Scikit-learn to analyze time-series financial data and compare predicted versus actual price movements.

Unemployment Analytics System

Designed and implemented a normalized relational database for analyzing unemployment statistics. Created entity relationship diagrams (ERDs), structured tables using normalization principles, and developed SQL views to support reporting and trend analysis.

COVID-19 Reporting Dashboard

Developed interactive dashboards in Power BI and SSRS to track COVID-19 case trends by province. Implemented time-series visualizations and cumulative reporting to support data exploration and trend analysis.

Crime Data Mapping

Built interactive Power BI geographic visualizations to map crime data by region. Implemented filtering tools to allow users to analyze crime patterns by location and crime category.

Work Experience

SAP Operations Clerk – Atlantic Superstore, Bedford, NS (July 2022 – August 2024)

Collected and validated inventory data using SAP systems, identified discrepancies, and supported data-driven operational decisions.

TELUS Online Data Analyst – Online, Canada/USA (January 2026 – Present)

I improved the accuracy of global digital maps through meticulous research and data verification. I evaluated geographic datasets in a web-based environment to ensure information relevance and high-quality navigation. My role leveraged local and national geographic knowledge to maintain the integrity and precision of innovative mapping tools.
